Curriculum Vitae

Andrew Seth Greenberg

Current Address:	110 Rachel Road Newton, MA 02159 (617) 965-8296
Work:	Endocrine Division, New England Medical Center, Jean Mayer USDA Human Nutrition Research Center on Aging at Tufts University Boston, MA 02111 (617) 556-3144
Date & Place of Birth:	April 1955 New Hyde Park, New York
Education:	1977, B.A., Amherst College, Amherst, MA 1981, M.D., New York University School of Medicine, New York, NY
Post-Graduate Training/Employment:	
1981-84, Intern, Junior Resident, Senior Resident in Internal Medicine, Hospital of the University of Pennsylvania, Philadelphia, PA	
1984-87, Medical Staff Fellow, Diabetes Branch, National Institute of Arthritis, Diabetes, and Digestive and Kidney Disease, National Institutes of Health, Bethesda, MD	
1987-91, Medical and Senior Staff Fellow, Section on Membrane Regulation, Laboratory of Cellular and Developmental Biology, NIDDK, National Institutes of Health, Bethesda, MD	
1991-93, Expert, Section on Membrane Regulation, Laboratory of Cellular and Developmental Biology, NIDDK, National Institutes of Health, Bethesda, MD	
1993-Present, Scientist II, Director, Program in Obesity and Metabolism, Energy Metabolism Laboratory, USDA/HNRCA at Tufts University, Director of Research, Obesity Consultation Center, New England Medical Center, Assistant Professor, Endocrinology and Molecular Medicine Tufts Medical School, Boston, MA	
1995-Present, Assistant Professor, School of Nutrition Science and Policy, Boston, MA.	

Licensure and Certification:

1983, Medical License, Pennsylvania-MD-028859
1993, Medical License, Massachusetts-80352
1985, Diplomate, American Board of Internal Medicine,
Certification Number 100521
1987, Diplomate, Endocrinology & Metabolism Certificate Number
100521

Honors/Awards: 1976, March of Dimes Summer Student Fellowship

1977, Graduated cum laude with Honors in Biology,
1977-78, John Woodruff Simpson Fellow in Medicine,
Amherst College
1991, Henry Christian Award for Excellence in Research,
1999, Leon Kassel, MD Lectureship, "Obesity in 1999, Etiology, Therapy
and New Frontiers"
2001, Ray and Roy Kroc Lecture in Advanced Diabetes Research and
Visiting Professor at Stanford University School of Medicine,
"Molecular Regulation of Adipocyte Lipolysis: Implications for
Diabetes"

A

Teaching:

1993-Present: Teach both in the Tufts School of Nutrition and Public Policy and School of Medicine

Patents

1. Cloning of the perilipin proteins. Inventors: Constantine Londos, Andrew S. Greenberg, Alan R. Kimmel, and John J. Egan
2. Methods for treatment of insulin resistance and related disorders. Andrew S. Greenberg-
patent application submitted.

Society Memberships

American Institute of Nutrition
North American Association for the Study of Obesity

Exhibit I

Regulation of Basal and TNF- α -Stimulated Human Adipocyte Lipolysis by Activation of the Extracellular Signal-Related Kinase Pathway. Counterregulation by Rosiglitazone HUI H ZHANG, MELANIE HALBLEIB, ANDREW S GREENBERG, Boston, MA

The aim of the study was to examine the mechanisms whereby TNF- α regulates lipolysis in human adipocytes. Preadipocytes from human abdominal subcutaneous adipose tissue were differentiated into adipocytes and subsequently used for the study. TNF- α treatment (100 ng/mL) for 6-72h increased lipolysis by ~1.5-2.5 fold. Perilipin A (peri A) is a protein that localizes to the lipid droplet surface where it acts as a barrier to reduce the access of lipases to lipids. Phosphorylation of peri A leads to its disassociation from the lipid droplet surface and increased lipolysis. Coincident with the TNF- α mediated increase in lipolysis, western analysis demonstrated peri A migrated as a doublet consistent with hyperphosphorylation. TNF- α also activated extracellular signal-related kinase 1/2 (ERK), as demonstrated by phosphorylation of ERK1/2 on western analysis. The increase was maximal within 15-30 min, and remained detectable at 24h. To investigate whether the activation of ERK 1/2 is involved in TNF- α -stimulated lipolysis, adipocytes were treated with TNF- α in the presence/absence of PD98059 (100 μ M), a specific inhibitor of the ERK upstream activator mitogen activated protein kinase kinase (MEKK) 1/2. PD98059 diminished TNF- α -induced-ERK and perilipin phosphorylation, increased perilipin expression by ~60%, and decreased lipolysis to below basal (non-TNF- α -treated) levels. PD98059 treatment alone also reduced basal lipolysis by 50-70%. Rosiglitazone (rsg) (5 μ M for 24h), a peroxisome-proliferator-activated receptor γ agonist, decreased basal (by ~40%) and TNF- α -induced lipolysis (to control levels) but had no significant effect on ERK 1/2 phosphorylation. Rosiglitazone thus counteracts the ERK mediated increase in basal and TNF- α -stimulated lipolysis. These findings suggest that the ERK pathway regulates both basal lipolysis and TNF- α stimulated lipolysis in human adipocytes. In addition, rsg reductions in basal and stimulated lipolysis are downstream from the ERK pathway.

Scientific Sessions, Diabetes (2001) A 13:49-0R
